In Moravia, Jews were expelled from „royal“ town in abt.1440 (earlier than in Bohemia) and the families settled in small towns but did not scattered to small villages like in Bohemia. There were 52 rather large Jewish communities in Moravia. The restriction on number of families (5400) was lifted in 1849.

genealogy

In Silesia, there were not large communities until abt. 1860. Individual families were coming from Moravian communities (Singers from Ivančice to Těšín, many Jews from Jevičko to Osoblaha, etc.). The restriction on number of families (119) was lifted as early as in 1794.

As always - accesibilty is heavily influenced by historic events...

Summary :

Many vital records of Moravia and Silesia are in Prague Natl. Archive. However, some period records are missing due to historic consequences (captured Sudetenland / destruction of records by the nazis in April 1945).

The catholic duplicates are often still in district archive, some of them are online (Opava regional archive).

The collections of Jewish museum archive in Prague can substitute missing vital records.

Silesia communities were mostly formed by Moravian Jews so their family history can be traced in „hometown“ Moravia records.
